EXPERIENCE

Stackline | Seattle, WA

Jul 2024 - Present

Full Stack Software Engineer | AWS Lambda, AWS Redshift, AWS DynamoDB, Node.js, React, React Native, C#, Go

- Redesigned Amazon Vendor/Seller Central crawlers with Chrome automation & fault-tolerant state-machine, cutting erroneous crawls 40% and ensuring 100% webhook/API data integrity for downstream GTM tools
- Architected high-availability checkout-as-a-service (600k+ orders/yr, 99.9% uptime) with exponential backoff, circuit breakers & autoscaling—patterns reused for CRM data waterfalls
- Delivered timezone-aware campaign-management microservice automating 100k+ Amazon Ads ops/mo via idempotent REST/GraphQL APIs and Kafka event streams; enabled programmatic outbound at scale
- Built parallel execution framework that 4× content-generation throughput; leveraged for AI-powered account enrichment & personalized outbound sequencing

Breaking Hits | Los Angeles, CA

Oct 2023 – Jul 2024

Founding Full Stack Engineer | Python, Tensorflow, PyTorch, NumPy, Pandas, SKLearn

- Constructed ML pipelines (Python, TensorFlow, PyTorch) processing 100k+ audio tracks/day; boosted classification accuracy 25% to power AI-driven lead scoring & ICP targeting

Edenspiekermann | Los Angeles, CA

Mar 2023 – Sep 2023

Full Stack Software Engineer | Typescript, Java, C++, Kotlin, React Native, Next.js, AWS, GraphQL, Firebase

- Integrated REST/GraphQL APIs & observability monitoring across client GTM stacks (Salesforce, enrichment, dialers), raising funnel data reliability
- Authored reusable TypeScript component library; cut frontend build time 30% and accelerated v1 delivery of internal RevOps tools

PROJECTS

Real-Time Trading Infrastructure | Python, Rust

- Engineered low-latency market data pipeline capable of handling 10,000+ events per second with sub-100 millisecond processing latency for high-frequency trading applications
- Designed automated risk management system utilizing thin-book market-making strategies, cross-exchange arbitrage detection, and regime-switching models to minimize downside exposure

Code Minion | Go, Temporal, TypeScript, Rust, MCP, Docker

- Built agentic orchestration platform on Go and Temporal that runs autonomous coding agents in isolated devbox containers, delivering review-ready merge requests with full audit trails
- Designed task-scoped MCP toolshed in TypeScript that dynamically curates tool subsets per blueprint, reducing agent context size and constraining blast radius across parallel runs

SKILLS

Languages: JavaScript (ES6+), Python 3, TypeScript, Rust, Kotlin, Java, C++, C# (.NET Core), SQL, Go

Frameworks: TensorFlow, PyTorch, React.js, Next.js, Node.js, Express, Vue.js, React Native, Flask, FastAPI

Technologies: Docker, Kubernetes, Google Cloud Platform (GCP), Amazon Web Services (AWS), REST APIs, GraphQL, Git, CI/CD, Redis, Kafka

EDUCATION

University of California, Riverside | GPA: 3.90

Sep 2018 – Jun 2022
